Dive and Discover

Dhigali Maldives is surrounded by a beautiful house reef with an abundance of coral and a lot of different fish species. The dive center is located in the middle of the northern side of the island close to the lagoon and provides a full service of equipment and training so that you can maximize every minute in the water.

The lagoon is about 5-10 meters wide and the reef starts in about 3-4 meters, quickly dropping to a depth of around 30 meters. Divers can discover a big range of different hard corals like table corals, brain corals, and more, as well as some species of soft corals deeper down.

Divers and snorkelers will encounter large schools of fusiliers and red tooth triggerfish, big groupers are circling around the reef and many other fish like tuna, eagle rays, lemon sharks, jackfish and many more can be seen. For snorkelers the north western side of the house reef is very good, too. Big schools of banner fish, batfish and all other marine life can be found here.

The house reef of Dhigali is definitely a highlight for everybody loving the marine life.
